Healthcare needs to move beyond point solutions that impact only one part of their organization and instead implement a platform with next-generation technology that addresses the current customer mission – providing a single-pane view of critical data – improving care coordination, increasing operational efficiency, lowering total costs, and helping organizations thrive in the evolving healthcare environment.

**OUR APPROACH**
careC2™ is a modern platform that drives integration and interoperability across the health systems, products, and settings. It enables rich integration, normalization, and management of data at scale from disparate devices and formats. The platform provides an operational framework for clinical performance improvements to efficiently deliver the right services to the right patient at the right point in the health journey. It provides a configurable command and control view for collaboration with real-time information to execute the customers’ desired outcomes.

**CAREC2 PLATFORM CAPABILITIES**
The careC2 platform provides a scalable and reusable coordination throughout the care continuum:

- Provides episodic care management in an ambulatory, acute, or post-acute care setting.
- Delivers community-based care management including social determinants in the convenience of patients place.
- Provides omni channel rules based communications to maximize the value of consumer chronic care engagement within the community beyond the clinical or inpatient stay.
- Maintains situational awareness of the patient and their health needs with their family and care team and community.
- Supports the right delivery of care while improving quality of outcomes and driving down costs.

Applications built on the careC2 platform drives reduction in readmissions, reduces the need for post-acute rehabilitation, provides better adherence to standards, and reduces the length of stay.
KEY FEATURES AND BENEFITS

Business Driven Development and Configurability
- Rapid application development
- Highly configurable and sustained operations
- Vendor agnostic with no lock-in components
- Application business logic delivered through rule-based workflows
- Workflow and decision rule based analytics

Enterprise Data Environment
- Data ingested, normalized, and managed at scale
- Supports various data formats and sources
- Descriptive, predictive, and prescriptive analytics embedded into the workflows
- Actionable intelligence enabling better decisions

Modern and Secure
- HIPAA compliant cloud-based solution
- ‘As-a-Service’ deployment model

WHY PARTNER WITH LEIDOS?
Bringing deep health care expertise across federal and commercial domains, we offer a proven enterprise-scale solution, leveraging clinical, EHR implementation, and health system interoperability skills/tools. Built on modern workflow technology and tied to modern business rules, we’ve adapted the application to the business needs not the business needs to the application.
- Delivering coordination of care capability across the continuum of care
- Integration across many disparate systems, leveraging the most modern technology
- Centrality of big data, “real-time” data, and decision analytics-driven solutions

NEXT STEP
Recognized as a Top 10 Health IT provider, Leidos draws on four decades of success to deliver a broad range of customizable, scalable solutions to hospitals and health systems, biomedical organizations, and every U.S. federal agency focused on health. To learn more about how Leidos is working to transform the next generation of care coordination, talk to a Leidos Health expert today.
