For more than 60 years, Leidos has supported deep space exploration and human spaceflight with technical expertise in IT, engineering, and science. Throughout our history, we have developed a strong understanding of the scientific environment and R&D capabilities needed to support public and private sector space exploration and human spaceflight missions. Building on this critical foundation, Leidos offers agile, affordable, and mission-oriented solutions delivered by experienced staff with track records of success at NASA centers, the Department of Defense, and the engineering and scientific community.

As a company, Leidos brings enterprise-wide capabilities to the space industry. We continually invest in the people, processes, and innovative technologies serving this important customer segment and have developed and fostered formal programs including Internal Research and Development (IRAD); Employee Resource Groups devoted to technical skills and training; Communities of Practice; and STEM-centric employee, intern, and community-based initiatives that contribute and shape how we design and deliver customer solutions.
