PROPASSAGE™

## Fully-configurable automated tray handling system

leidos

An innovative, secure and efficient checkpoint solution

The modular construction and flexibility of the Leidos ProPassage™ system allows each individual application to be designed and configured to produce an almost infinite number of layouts to suit each application – a real benefit for installations where space is restricted or constrained.

ProPassage is designed to be integrated with the world's leading manufacturers of checkpoint X-ray and computed tomography (CT) machines and can be configured for local or remote screening.

ProPassage provides a controlled entry and exit and subsequent optimization of imaging and X-ray machine.

Fully CE certified, ProPassage has been ergonomically designed to ensure easy loading and unloading of hand baggage. A simple and effective automated tray return facility increases throughput rates whilst eliminating the need for repetitive and time consuming, manual handling of trays by checkpoint personnel.

AIRPORT WORKFORCE MANAGEMENT SYSTEM

›   Improves operational efficiency
›   Reduces queue waiting times and congestion
›   Enhances overall public safety, security and service
›   Significantly reduces security checkpoint personnel manning levels
›   Cost effective, rapid return on capital investment
›   Provides outstanding value and performance
›   Ergonomically designed for public and security personnel use
›   Deployed in several international airport terminals
›   Seamless integration into
    ›   Mach-Secure® portfolio
    ›   3rd party applications
