

# Logistics Commodities and Services Transformation Programme

In 2015, Leidos was awarded the Logistics Commodities and Services and Transformation contract from the UK Ministry of Defence (MOD). The 13 year, £6.7bn contract will transform the UK's Defence supply chain.

With the experience of Leidos, a global leader in scientific, information technology, engineering and technical services, the UK Armed Forces is now able to leverage best-in-class technology solutions that rival those deployed by leading companies in the private sector.

## BUILDING A SMARTER SUPPLY CHAIN

Like many top organisations, the MOD is increasingly outsourcing logistics responsibilities to focus on core activities. In doing so, they are able to take advantage of digital innovation that makes it possible to provide mission-critical supplies in a timely manner.

Team Leidos now operates the commodity procurement, storage and distribution functions previously performed by the MOD's Logistics Commodities and Services Operating Centre.

Since 2015, the Logistics Commodities Services Transformation Programme has delivered over £1bn products to the UK Military using cutting-edge procurement techniques and strong governance. That means getting everything from food rations to boots, exactly where they need to be, at the right price and at the right time. With an effective process for engaging the market, the Programme has driven equal opportunity to all suppliers across the Food, Fuel, Medical, General Supplies and Clothing commodity sectors.

The Programme is implementing digital transformation for one of the world's most foremost military operations, while generating hundreds of millions in savings for the UK government and taxpayers.

## WHO IS TEAM LEIDOS?

- ▶ **Leidos Europe** - the Prime Contractor. Leading on Supply and Support Chain Integration, IT Services, Business Intelligence and Customer Relationship Management.

- ▶ **Leidos Supply** - Procurement and contract management.
- ▶ **Kuehne + Nagel** - Storage, Distribution and Freight activity
- ▶ **TVS Supply Chain Solutions** – Inventory, category and commodity management.

In addition, Leidos will be utilising the specialist capabilities of a number of world class companies in smaller, niche areas, primarily Agility and Prolinx.

Together this is a skilled and experienced team of private sector defence and logistics partners, with the global expertise to deliver the transformation required.

## SIGNIFICANT TRANSITION PROJECTS

- ▶ **Commodity Transformation**  
Commercial inventory management systems and processes have been introduced to streamline procurement, inventory management and improve efficiency of supply.
- ▶ **Defence Fulfilment Centre**  
We have built a new, purpose-built warehouse with a combined 850,000 square feet of capacity.
- ▶ **Transport Management**  
The existing network has been redesigned and reconfigured.
- ▶ **Support Chain Integration Platform (SCIP)**  
SCIP provides a single interface with legacy MOD systems and is the foundation of the supply chain solution.

## LEIDOS - A KEY ENabler

Leidos is a key enabler to the MOD, playing an active and scalable role to the Front Line Commands in peace-time and on operational duty.

At the end of 2019, Team Leidos celebrated an important milestone as the Transition Period was brought to a close. Since 2015, the Programme has delivered a fully operational Defence Fulfilment Centre, closed legacy warehouses, migrated stock and completed IS transition.
