

Transforming Care Coordination

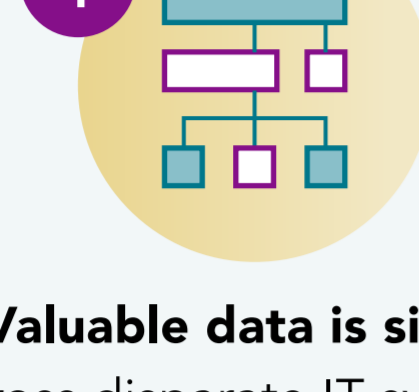

Outcome-driven solutions that impact the future of healthcare

Revolutionizing the integration of technology and systems across your ecosystem to impact clinical, operational, and financial results.

The Challenge

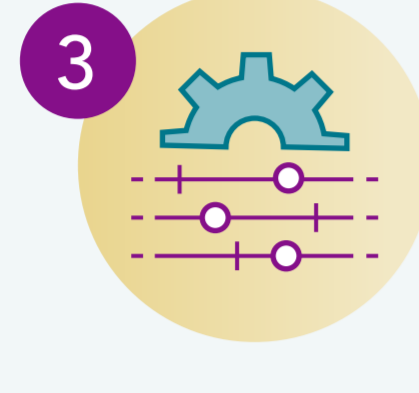

As healthcare evolves, providers, hospital systems, and payers need to move beyond point solutions that impact only one part of a patient's journey...

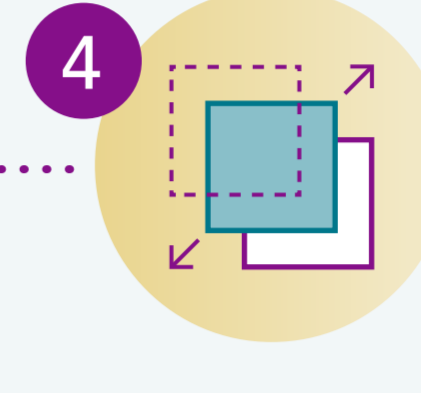

1 Valuable data is siloed across disparate IT systems, reducing efficiencies when caring for patients

2 Unnecessary variation in executing care delivery diminishes clinical and financial performance

3 Multiple labor tools render inaccurate visualization of projected resource needs, resulting in under/overstaffing and risk misaligned skillsets

4 Unmeasurable results impede proposed improvement initiatives designed to impede clinical and financial outcomes

... and instead use technology that addresses an **entire episode of care – from home to home** – while helping organizations thrive in this evolving environment.

The Leidos Solution

Advancing the next generation of care coordination to deliver a consistent patient experience.

- Clinical System
- EHR System
- Lab System
- Financial System

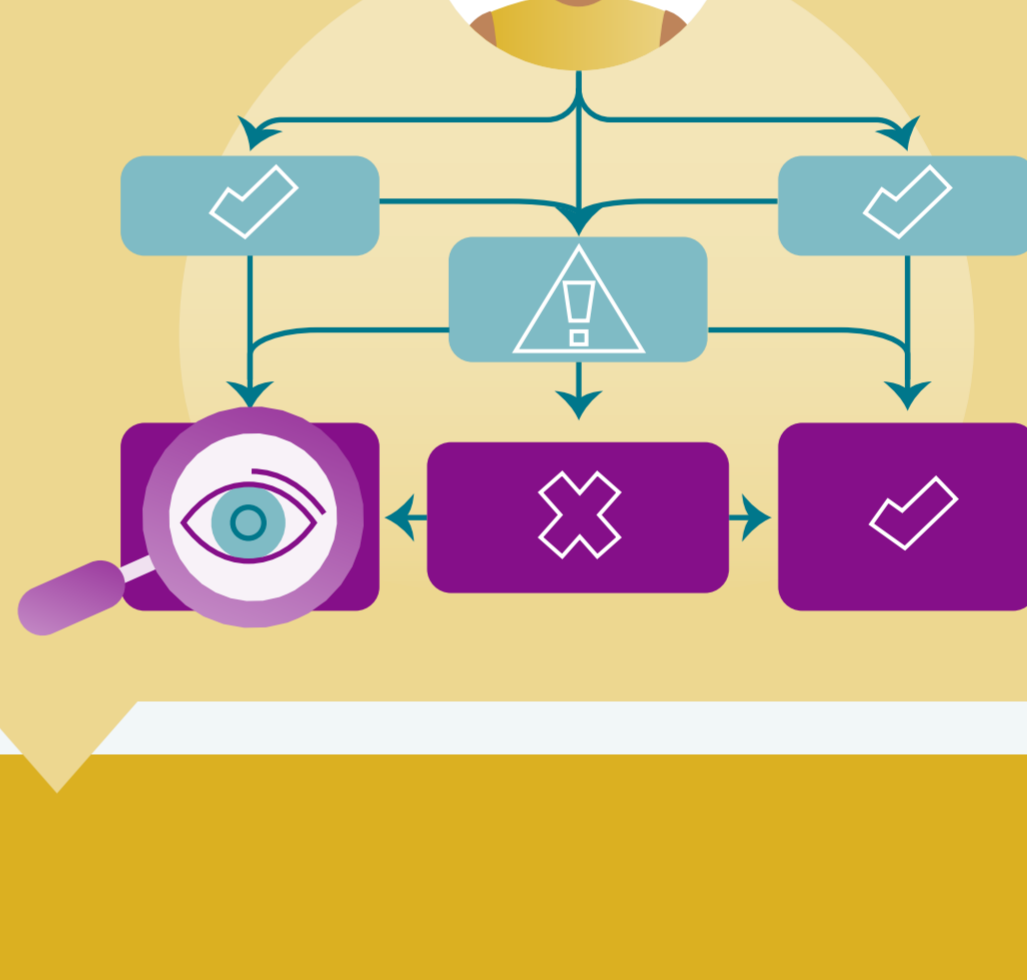

Seamless integration of disparate IT systems on a single platform

- Optimize technology investments
- View critical data in a single location

Proven technologies to reduce unnecessary variations in clinical workflows

- Increase visibility
- Improve patient outcomes

Strategic recommendations for clinical resource forecasting

- Predict and identify potential staffing gaps months in advance
- Reduce labor costs while maintaining optimum patient care

Proof in Our Partnerships

With a South Florida hospital system, Leidos...

- Integrated disparate IT systems, creating the same command and control environment that we do in complex, large-scale government systems
- Combined input from physicians with branching workflow logic, assuring quality care delivery and providing analytics to inform cost management

Results

72% decline in discharge to home health

78% decline in discharge to rehab

33% decline in discharge to skilled nursing facilities

50% increase in discharge to home with no additional services

15% reduction in the total cost of care

\$2.1M projected savings

With a Texas nonprofit health system, Leidos...

- Integrated disparate legacy data sources and applications from multiple domains to develop a web-enabled predictive workforce forecasting and gap analysis application
- Included predictive analytics to accelerate and sustain resource improvement associated with proper staffing levels, need for and use of premium labor, and anticipated recruitment efforts

Results

\$22 million projected savings on staffing in the first year

3-9 month accurate projection of anticipated gaps in resourcing

Actionable information to initiate recruiting process **months** in advance

Delivering value-based care with improved outcomes is your goal. Transforming how you orchestrate your path is ours.
